Problem Statement/Industry

WADHWANI FOUNDATION

Problem Being Solved

The Problem : Kanyakumari is a global landmark, yet its "Green Cover"—the lush hinterlands and tribal-governed lakes—remains economically invisible. Tourists are funneled into a few overcrowded spots (like the Rock Memorial), while tribal communities (the Kaani tribes) remain marginalized. Travelers lack a verified portal to book authentic forest s

Supporting Data

The number of visitors increased significantly, from roughly 57,662 in 2021 to 407,139 in 2022.

Problem Analysis

WADHWANI FOUNDATION

Affected Stakeholders

Tribal Communities (Kaani tribes) in Kanyakumari who struggle to get direct income from tourism due to dependence on intermediaries. Tourists and travelers who find it difficult to discover authentic, verified eco-stays and tribal experiences. Local guides and small eco-stay owners who lack digital platforms to reach global tourists directly.

Impact on Stakeholders

Tribal communities earn very little from tourism because middlemen take most of the profit. Tourists struggle to find authentic and trustworthy tribal experiences. Local guides and small stay owners lack visibility to reach visitors. At the same time, popular attractions face overcrowding, creating environmental pressure and limiting oppurtunities.

Root Causes

Limited digital access for tribal communities, dependence on middlemen in tourism bookings, lack of verified platforms for authentic eco-stays, poor promotion of lesser-known natural locations, and tourism marketing focused only on popular landmarks cause overcrowding while preventing local communities from directly benefiting from tourism.

Personal/Team Connect

As students interested in technology and sustainable development, we want to solve this problem because we see how tourism in Kanyakumari benefits only a few locations while local tribal communities remain excluded. We are motivated to use digital solutions to support fair tourism and help local communities gain better opportunities.

Customer Segment & Persona

Primary Segment

Primarycustomers: Eco-conscious travelers seeking authentictribal stays with direct community impact

Secondary Segment

Tribal Homestay Owners & Local Eco-Tour Guides in Kanyakumari

Persona

Thanush Kumar P
Age in years: 20
Location: Rural
Organizational Role: {Persona's primary role}
(if applicable)

Primary Source of Information: Traditional Media (TV, Newspapers)

Shopping Preference: Mostly Offline

Comfort with Technology: Medium

Favourite Social Media: Instagram

Favourite Offline Gathering Spots: malls

Jobs-to-be-Done

WADHWANI FOUNDATION

Functional JTBD

A tech-savvy college student wants to easily discover authentic eco-tourism spots, book verified tribal stays, plan trips digitally, check weather and crowd data, and make secure payments without middlemen.

Emotional JTBD

The student wants to feel confident, excited, and stress-free while planning travel. They want assurance that the trip is authentic, safe, and meaningful while supporting local tribal communities.

Social JTBD

The student wants to share unique travel experiences with friends and on social media, gain recognition for discovering hidden destinations, and inspire peers to explore eco-friendly tourism.

Current Alternatives

Current Alternatives

The student currently uses travel apps like Google Maps, TripAdvisor, Airbnb, and YouTube travel vlogs, along with social media recommendations and blogs to find places and plan trips.

Gaps in Current Alternatives

Current platforms focus on popular tourist spots, lack authentic tribal experiences, involve middlemen increasing costs, and do not provide verified eco-tourism stays or real-time crowd and environmental dat
